

April 8, 2016

To whom it may concern,

Videolabs S.A.S. is a software company based in Paris, France and founded by two VLC lead developers. The company is in a charge of developping and maintaining all the official mobile platforms of the VideoLAN project. The company also offers consulting and development teams to work on customer projects related to multimedia and other embedded projects. Most of the developments made by the company are merged and/or published as an open-source license.

Nicolas RECHATIN was an intern at Videolabs S.A.S. from July to August 2015. During that time Nicolas had a software engineer position and was responsible to start the development of a new port of VLC media player for a mobile platform called "Tizen" (owned by Samsung). Software development for this mobile platform requires a deep understanding of computers, "C" and, to a lesser extent, "C++" language.

Even if Nicolas never had any strong experience in "C" before, as an engineer he has been able to level up his skill set very quickly and pick up the project in only a few days with only limited help from his co-workers. We were really impressed by Nicolas' work, he created the whole graphical user interface (similar to the one available on VLC for Android) in few weeks only. After his internship ended, some of us took over the project and were very pleased to continue on top of Nicolas' work. The product is available worldwide on the Tizen store and is now in the Top 10 of the most downloaded applications.

Nicolas is a smart, talented and a hard-worker. We would be pleased to work with him again in the future.

Sincerely,

Ludovic FAUVET
CTO & Lead developer
